(54) COLOR REPRODUCING TERMINAL DEVICE AND NETWORK COLOR REPRODUCING SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To accurately correct displays which each of users has by generating a profile in order to obtain a service in which the user receives an accurate color reproducing through a network.

SOLUTION: The system is provided with a network connecting means, which connects the system to a network 601, a color picture display means 605, which displays a color picture, and a color conversion means 604 which obtains reproducing characteristics and observation illuminating conditions of the means 605 by a color camera or a sensor, conducts color conversion of a color picture 603 obtained through the network and outputs the conversion result to the means 605. Note that a color conversion is also conducted by the color conversion in which the color picture obtained through the network may be converted using a color conversion profile 602 being down loaded through the network and a color conversion program.

LEGAL STATUS

[Date of request for examination]

14.03.2003

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
